

# FloorFil®

## Facts

1. FloorFil is a single part, solvent based repair system for high pressure laminated floors. It will cure in approximately one hour, but we recommend 24 hours for total cure. **FF99 Solvent is the ONLY recommended solvent for use with FloorFil.**
2. One (one ounce tube of FloorFil) will approximately fill an 8 foot Seam of flooring with an 1/8" bead. If the seam is wider than 1/16" (but should never be larger than 1/8") a second application will probably be necessary. It can be used to fill an area that is no longer than 1/4" in diameter.
3. FloorFil will not freeze because of the solvent .
4. The **shelf-life of FloorFil is 1 year if opened** and correctly capped, two years, if unopened.
5. FloorFil can withstand heat up to 120 °
6. FloorFil's VOC is 48 (529 g voc / L) wet measurement and FF99 Solvent is 100% VOC and will attack non-laminate surfaces like, finished wood, PVC, etc.
7. FloorFil dries to a matt finish. To obtain a Glossy Finish, request Clear Gloss be added.
8. To increase the cure time of FloorFil, FloorFil Retarder can be added to the mix.
9. FloorFil will cure rigid so it should not be applied in seams in heavy traffic areas where the flooring requires flexibility.
